Introduction

USBWebserver is a combination of the popular webserver software: Apache, MySQL, Php and PhpMyAdmin. With USBWebserver it is possible to develop and show your php websites, everywhere and anytime The advantage of USBWebserver is, you can use it from USB of even CD

USBWebserver is perfect for:

- Show a offline version of your website
- Anywhere and anytime develop php websites
- No need for expensive hosting
- Working at multiple locations at projects
- A good test before putting your website online
- And many more

Starting with USBWebserver 8

To begin you need to download USBWebserver 8 from http://www.usbwebserver.com.
Unpack the downloaded file with winrar of winzip.
To begin you start usbwebserver.exe

usbwebserver.exe

The main screen of USBWebserver 8.0 appears.

When the green sign appears by [Apache] en [MySQL], USBWebserver with his components are fully started

USBWebserver will be visible in the taskbar. With the symbols in the upper corner you can place USBWebserver in the taskbar ( ) or in the system tray ( ).

Root dir: This is the directory where you should place your website files

Localhost: The browser will open localhost and show your website

PHPMyAdmin: The database management software PHPMyAdmin will be started

www.USBWebserver.com: The usbwebserver website

Apache

The webserver component is Apache 2.2.

The second page will give you the possibility to check and control the status of apache
On the bottom are two shortcuts, to the logs and to the settings (settings/httpd.conf)

MySQL

This page has the same functionality as the apache page. But it controls MySQL The shortcut is linked
to the settings file for MySQL (settings/my.ini)

Settings

The basic settings can be found at this page

Language: It is possible to change the language of USBWebserver

Open de browser when start: The default browser will open localhost when USBWebserver start

Hide USBWebserver at start up: USBWebserver will be placed in the system tray by default

Root map: You can change to root directory

Poort apache: The port for apache (default 8080)

Poort MySQL: The port for MySQL (default 3307)

Opslaan: The settings will be saved and USBWebserver will be restarted

PHP

PHP is installed as a module for apache

This module makes it possible to run dynamic php pages

The default settings are visible at http://localhost:8080/phpinfo.php.

PHPMyAdmin

PHPMyAdmin is the default database management system in USBWebserver.

It makes it possible to create, adapt and control databases

For a the manual we refer to:

http://www.phpmyadmin.net/home_page/docs.php?books
